Stroke is the most common health problem globally. According to the results of Basic Health Research (Riskesdas) in Indonesia in 2013, and 2018 showed an increase in prevalence of 7 per mile (per 1000 population) in 2013, and 10.9 per mile (per 1000 population) in 2018. According to Riskesda in 2018, as many as 52.3 per mile (per 1000 population) stroke cases are of productive age with an age range of 15 to 64 years which can cause temporary or permanent cessation so as to reduce work productivity and increase disease cases. To determine the factors associated with the risk of stroke in productive age. This study aims to determine the factors associated with the
